## GRID TIED SOLAR ROOFTOP SYSTEM

Grid tied systems are usually based on intelligent inverters, which uses the solar power produced to augment the utility based power. These inverters need a power source to match the voltage and frequency of the grid and are economical as there is no requirement of batteries. The system can also be used to supply any unused power back into the grid

## ADVANTAGES OF NEPC GRID TIED SOLAR ROOF TOP SYSTEMS

- Rooftop Solar has 80% accelerated depreciation in 1st year
- Saves 28% tax on investment
- The system operates with low maintenance for a long span of time
- Intelligent mounting system
- One stop sales service for the entire PV kit
- Environmentally friendly - No noise, No smoke, No pollution, No Electricity bills
- Free power for roughly 20 years of post payback
- The system reduces EB bills significantly
- The system significantly reduces usage of diesel
